## WORK EXPERIENCE

### AI PROMPT & EVALUATION SPECIALIST @ STELLAR AI

November 2024 - May 2025

- **Created prompts** and annotated **solutions** to **train AI agents** in a multi-app simulated environment using Reinforcement Learning from Human Feedback (RLHF).
- **Worked with** structured **JSON data** to simulate real-world digital workflows (e.g., messaging, email, calendar).
- **Designed detailed action graphs** outlining task dependencies, including parallel and sequential execution flows to **guide agent behavior**.
- **Reviewed** and **corrected** peer **annotations** for accuracy and compliance with project standards.
- Helped improve annotation standards by providing structured feedback and maintaining consistency across training data.

### FREELANCE AI EVALUATION SPECIALIST @ OUTLIER

January 2024 - March 2024

- **Evaluated and analyzed** AI-generated **code** to identify strengths and weaknesses, enhancing model performance through reinforcement learning.
- Developed assessment criteria for code quality, accuracy, and efficiency, providing **actionable feedback** to **improve AI model** code generation capabilities.

## PROJECTS

### FULL STACK E-COMMERCE PLATFORM

Deployment: [shop.jaiveersingh.com](https://shop.jaiveersingh.com)

Source Code : [github.com/JaiveerS/ecommerce-store-backend](https://github.com/JaiveerS/ecommerce-store-backend)

- **Designed and implemented** a comprehensive full-stack e-commerce platform utilizing **Java, Spring Boot**, **ReactJS** and **MySQL**.
- **Architected** a secure and scalable **Spring Boot application** with a modular design and **RESTful API**.
- **Implemented** robust security measures, including **JWT-based authentication** and authorization within the **Spring Security framework**, to safeguard sensitive user data and transactions.
- **Engineered comprehensive CRUD (Create, Read, Update, Delete) operations** for products, orders, and user profiles using **Spring JPA**.
- Successfully **deployed the application** on a Virtual Private Server (VPS) with Nginx, ensuring reliable access for users.

### SMART EMPLOYEE MANAGEMENT SYSTEM

Source Code : [github.com/JaiveerS/smart-employee-managment-system](https://github.com/JaiveerS/smart-employee-managment-system)

- **Designed** a scalable and modular employee management system using a 3-Tier architecture, Model-View-Controller (MVC) pattern, and Service-Oriented Architecture (SOA) approach.
- **Developed a functional prototype** to demonstrate core functionalities and user experience, allowing for early feedback and iterative improvements.
- **Created comprehensive documentation** including UML diagrams (use case, sequence, class, component, deployment) to support system understanding and development.
- **Collaborated effectively with a team** of 5 developers, organizing regular meetings to ensure clear communication and efficient project execution.

## SKILLS

- **Programming Languages:** Java, SQL (Structured Query Language), HTML, CSS, JavaScript
- **Frameworks & Tools:** Spring Boot, ReactJS, Hibernate (ORM), REST APIs, Git, Nginx, Linux
- **Databases:** MySQL, Oracle (familiarity)
- **Additional Skills:** Application Development, Security (JWT, Spring Security)

## EDUCATION

### BACHELOR OF SCIENCE IN COMPUTER SCIENCE

Lassonde School Of Engineering - YORK UNIVERSITY, TORONTO ON
